Baby Head Band™ and Circuit Bumpers™

A more comfortable and versatile way to secure nasal prongs

respiralogics™

Baby Head Band and Circuit Bumpers are intended to secure the nasal interface during oxygen therapy, nCPAP or NIV therapy.

The Baby Head Band is made of breathable, non-latex foam that absorbs and wicks away moisture leaving the scalp and skin dry. The soft material of the head band allows it to conform to even the tiniest of heads while maintaining the circuit position. The soft outer covering of the Baby Head Band allows for head movement while holding the nasal prongs and circuit stable.

The new reversible Circuit Bumpers secure and stabilize the position of the inspiratory and expiratory limbs to the soft outer side of Head Band while providing optimal prong positioning for infants of all shapes and sizes.

The Baby Head Band and Circuit Bumpers work in conjunction with neonatal/pediatric ventilator circuits and oxygen therapy tubing. Designed for use in NICU, PICU, surgery and clinics for stable positioning of nasal interface.
