Baby Band™ for Chin and Head

A more comfortable way to close the mouth and position Baby Head Band™

Baby Band for Chin and Head is designed to stabilize the position of the Baby Head Band and gently close the mouth during delivery of oxygen therapy, nCPAP or NIV therapy.

One Baby Band and three Hook Tabs are packaged per bag. Each Band is made of breathable, non-latex foam that absorbs and wicks away moisture, leaving the chin, cheeks, and head dry. The soft material of the Band conforms to the chin and head for a comfortable fit. One end of the Band and the Hook Tabs allow attachment to the Head Band for best placement.

The Baby Band for Chin and Head works with the Baby Head Band™ and Circuit Bumpers™, as well as the Baby Cap™ and Circuit Bumpers. The Band can be used in all neonatal critical care units, delivery rooms, and special procedure units.
