StatStrap® Infant Positioning Strap

Safely secures and positions newborn infants of various sizes within an incubator

The StatStrap Infant Positioning Strap is designed as a positioning aid for use in incubators equipped with slotted mattress trays. StatStraps are single-patient, disposable-use items.

StatStraps are constructed of soft laminated foam material with hook-wing tabs on each strap to allow secure closure of the strap to the mattress tray.

Once the StatStraps are in place and securely fastened to the mattress tray, the straps cross over the infant body in an "X" pattern and attach to each other. The straps aid in positioning the infant and preventing gross body movement. A Safety Tie Strap is included to secure the main straps together into a single unit.

Caution: Not a DOT restraint device and cannot provide any protection to patient or attendant in event of an aircraft/vehicle crash or rapid deceleration.

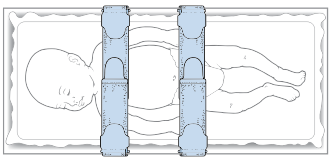

Ordering Information

41025	StatStrap Infant Positioning Strap	Box: 25 sets

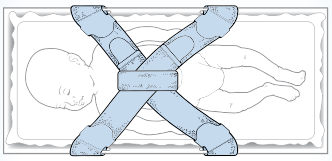

Companion Products

45105	Preemie Beenie™ – Size 1 (≤ 25 weeks GSA) – White	50/box
