

For Immediate Release
New Adapter for Soft Mist Inhaler Medication Delivery
Reno, Nevada - 1 November 2017

ODAPT™ Soft Mist Adapter receives FDA approval and is now available in the United States. **ODAPT™** is the only product created specifically for use with the Soft Mist family of inhaled medications. Designed by a Respiratory Therapist to provide clinicians and patients a solution for face mask and tracheostomy application of Soft Mist Inhalers (SMI).

ODAPT™ aids in the delivery of soft mist inhaled medications for pediatric and elderly patients where a face mask is required. As well, it expands the delivery of soft mist for tracheostomy patients of whom in the past had no delivery option.

Respiralogics has teamed with McArthur Medical to distribute the ODAPT in the USA and jointly introduced the ODAPT to the US market during the 2017 AARC meeting.

Don't adapt it, **ODAPT™** it!
